

Freedom is what you make of it

by David Fellows [\[1\]](#)

1. UK Governments can no longer claim that EU rules prevent necessary changes to improve the UK economy or the life prospects of UK citizens. The UK's decisions may have some tariff consequences but there is no EU veto or imperative that would lead us to doing those things that run counter to our best interests. After the deal was done in December the PM remarked "freedom is what you make of it". Surely this will be his epitaph but will it be a celebratory one?
2. The time is rapidly approaching when we must learn of the Government's detailed plans for fulfilling the PM's promise to level up the regions. We shall then see what

effort and risks ministers and senior civil servants consider appropriate to honour the pact with those who made Brexit possible by changing allegiances at the last general election.

3. Challenges abound for all participants. Local authorities, for instance, can offer valuable insights and assistance with delivery. Naturally they will want to put their own stamp on initiatives. In doing this some may make untenable demands, vilifying Government merely for political purposes. Making a start with the most constructive partners is surely important. An advance guard must be identified capable of identifying the route to success.
4. The adequacy of key public sector organisations must be considered. For instance, how is the private sector to be effectively incentivised to participate? Can the woeful state of skill training be improved and properly presented to those who could benefit? How are start-ups and small businesses to be supported in a practical manner? How should business regulation be simplified to encourage enterprise while maintaining British values? How and to what extent could universities be tasked to make a meaningful contribution with funding skewed to reflect support for local enterprise development? How is the huge heft of public procurement to be employed? Is this the moment to create regional investment institutions to support private enterprise and if so, in what form?
5. The private sector must be invited to make a major contribution to this agenda. Brexit has not shown the sector's representative bodies in a particularly constructive light. They must demonstrate a capacity to contribute or be circumvented. One way or another the sector must be encouraged to provide ideas and resources that are appropriate and of long-term benefit to regional development.
6. No one has 'the' answer. The public sector is diverse,

resource hungry and often politically divided. The private sector is competitive, risk averse, self-interested. Representative bodies of all kinds have limited, common-denominator agendas. Consultancies tend to provide answers that they hope will lead to repeat business. This is not a task to be resolved purely by conference or working group. The answer must be derived from an unruly discourse that generates ideas from a series of interactions across all issues involving many different organisations and individuals, producing contributions that are more revealing than manicured.

7. The general public must also have an understanding and an opportunity to contribute to this agenda. The remaking of the regions and the consequent clarification of the opportunities for London and the South East are about reshaping opportunities for communities, families and individuals.
8. The task entails the rebalancing of the relationship between the wider London area and the regions. Ultimately the responsibility for a successful outcome of this immense task lies with Government. It should be approached with this clearly in mind. There must be both local and national ownership, public and private sector engagement. The national contribution is pivotal and should be recognised through branding and governance.
9. This may not seem the best time for such an adventure. The virus has caused serious economic and personal damage. Restrictions will continue for some time while huge expenditure has already been incurred. Some say that this is the time to recognise and reinforce what works, time to throw everything behind the pulling power of London and the South East. They caution against forsaking the golden goose. Of course this is a fallacy borne of anxiety when the currency is realism. London does not work nor do the regions. The one lacks liveability, the other lacks opportunity both need attention. It is time to face facts, there was never a

golden age.

10. The digital technology had been slowly revealing our needs and suggesting options. Covid-19 has caused us to build on these developments, changing our attitudes and behaviour with astonishing speed. The Covid-19 experience has also provided Government with invaluable lessons about joined up working and the need to achieve steadfast alignment between messaging, planning and execution.
11. Things will never be quite the same again. It is time to embrace change, we just need to do it properly.

Digital Media, Transparency and the War Against Corruption

Posted by David Fellows and John Leonardo [\[1\]](#)

Corruption is highly damaging to economic and social life through misappropriation of public funds, restriction of open market activity, favouritism towards families of those in power, and the many detrimental effects of rent seeking. In this piece we review evidence for the power of transparency to reduce corruption and improve economic performance. We then consider the increasing relevance of digital media, particularly social media, to the transparency agenda and how its application can be encouraged.

Economic performance, transparency and corruption

The IMF's ['Framework for Enhanced Fund Engagement'](#) 2018 noted that (i) transparency is significantly correlated with a perceptions-based indicator of the control of corruption; (ii) higher levels of corruption are typically correlated with lower growth; and (iii) corruption and governance are significantly associated with average long-run per capita growth, investment, and revenue. The IMF's Fiscal Monitor: [Curbing Corruption](#) (April 2019 edition) shows that the least corrupt governments can collect considerably more in taxes than those at the same level of economic development. [In a blog announcing this guidance](#) Christine Lagarde, then Managing Director of the IMF, affirmed the importance of transparency by commenting that; 'At the end of the day, the most durable "cure" for corruption is strong, transparent, and accountable institutions'.

How governments may involve digital media

The [World Bank Document](#) 'Enhancing Government Effectiveness and Transparency: The Fight Against Corruption' (September 2020) details studies in which developing countries have sought to combat corruption by improving transparency.

It instances:

- The identification of corruption relating to infrastructure projects in Columbia by the Government

urging citizens to publicize unfinished projects.

- The introduction of participatory budgeting in Brazil where one study found that adopter municipalities achieved a 39% higher tax collection than those that had not.
- The use of Beneficial Ownership declarations in the Ukraine where online access to records promises significant advantages following a chequered introductory experience.
- Public reporting of Supreme Audit Institution (SIA) findings in Ghana, and India's practice of encouraging the public to comment on SIA reports and provide evidence of misdeeds.

These are all public engagement activities that can most readily be undertaken via digital media.

The impact of social media

Social media is a growing phenomenon across the developing world. It can be used by governments to encourage citizens to make their views known (figures in million).

Country	Population	Internet users Dec-00	Internet users Dec-19	Facebook users Dec-19	Twitter users Dec-19	Min of Finance Twitter followers Jun-20
Kenya	53.7	0.2	46.8	7	0.954	*0.004
Rwanda	12.9	0.005	6	0.6	0.079	0.064
Uganda	45.7	0.04	18.5	2.5	0.177	0.062

Note: *Kenya's Anti-Corruption Agency has 293,000 Twitter followers

A survey of Kenyan social media users conducted by [SIMELab in 2020](#) suggested that social media use was becoming highly age specific.

Age	Social Media Preferred by Kenyan Users (SIMELab findings)
Primary school pupils	Facebook
14 to 20 years	Pinterest, Snapchat, TikTok
21 to 25 years	Instagram, Snapchat, Telegram
26 to 35 years	Linked in (particularly for those from higher education), Skype, Twitter

The survey identified the three most used media as WhatsApp (89%), Facebook (82%) and YouTube (58%). [TIFA Research](#) has identified Facebook as the current most effective advertising platform.

The African public accountability movement [Connected Development](#) (CODE) based in Nigeria uses digital media to help marginalised communities monitor public service investment employing its 'follow the money' slogan. A current focus is COVID-19 expenditure.

[We have analysed](#) the correlation between Transparency International's 2019 CPI scores for the 48 best performing African Countries included in the index where both Facebook and Twitter services were available. There are strong positive correlations between social media user numbers and perceived corruption levels. This result seems consistent with the transparency/corruption relationship found in the IMF Framework for Enhanced Fund Engagement, reflecting public

interest in government affairs and corruption.

A growing relationship between formal digital media and social media

Over the past year online news media have reported government initiatives against corruption and investigated acts of corruption. Two examples:

- On 11th November 2020 the [Cyprus Mail commented](#) that: 'without (greater) public support, anti-corruption groups are unlikely to attain their objectives, because the politicians will have no reason to take any notice of them'.
- On 21st November 2020 [ABS-CBN News reported](#) that a task force investigating Philippine Government corruption led by Justice Secretary Menardo Guevarra had received at least 60 complaints during the previous two weeks.

These causes could benefit from social media use by community activists (Cyprus) and the government (Philippines).

Conclusions

The economic impact of the COVID-19 pandemic on developing countries brings the prospect of reduced national resources unless and until these countries can address their corruption challenges.

Formal online media have helped increase transparency in recent times. Further, social media is fast becoming an important form of popular communication throughout the developing world. The targeted use of social media platforms presents an effective opportunity for online public engagement that makes messaging easy to assimilate and respond to.

Governments can use social media to seek public support for reporting anti-corruption activities, complaining about unfair decisions and exposing the accumulation of unexplained wealth by politicians and officials. Such engagement is, however, dependent on the demonstration of government integrity, the recognition of public priorities, and the provision of basic information on services and funding to local communities.

The international development community can encourage governments to uphold press freedom, protect whistle-blowers and use social media as part of the transparency process, and scale up its support to countries that are pursuing effective anti-corruption policies.
